Download

The operating system known as OS X has always looked awesome too and when Windows Vista was released, you would have heard numerous times that a lot of the newer Windows interface is copied from Mac OS X.. Although Windows has dominated the operating system market for many years already, there is still quite a number of people that prefers Mac over Windows because of advantages such as stability, lack of virus, secure because it is built from Unix and of course the Mac itself looks beautiful.

Unfortunately you cannot just download and install Mac OS X on a non-Apple PC unless you are willing to use some of the hacks that can be found on the Internet.
